This series focuses on today's young achievers who are poised to become tomorrow's leaders, by unraveling their past experiences, the challenges they faced and their vision for the future.

"Experts project that nearly three-fourths of all design work in the Architecture and Engineering industry will be executed with building Information Modeling (BIM) software within the next ten years. That shift could cost millions for each firm, as they will have to create capacities and adapt to an unfamiliar format. Satellier offers a strategy of transition, at a fraction of in-house costs and a minimum of risk. It allows the client to experiment with this new format and develop their own capabilities in line with evolving needs."
